

Saran Chuephoodee (Dream)

System Analyst | Business Flow | Functional Specification | API & System Integration

Bangkok, Thailand

093-2094456

d.saranc@gmail.com

SUMMARY OF QUALIFICATIONS

System Analyst / Business Analyst-oriented professional with 1.5 years of direct experience in requirement analysis, business flow analysis, functional specification preparation, system documentation, stakeholder coordination, and system enhancement support. Experienced in translating business requirements into functional solutions, clarifying workflows, analyzing system impacts, and coordinating with business users, developers, QA teams, vendors, and related stakeholders to support successful system delivery.

Backed by 8 years of overall IT experience across Telecom and E-Commerce domains, with a strong foundation in software testing, backend validation, API integration, SIT/UAT support, defect investigation, and production release support. Able to bridge business needs and technical implementation by understanding both requirement objectives and system behavior, especially in database-driven business logic, API integration, data flow, and end-to-end service processes.

CORE SKILLS

- Requirement Analysis & Requirement Clarification
- Business Flow Analysis
- Functional Specification Documentation
- System Documentation
- Use Case Diagram / Sequence Diagram / ER Diagram
- Gap & Impact Analysis
- API & System Integration Analysis
- Data Flow & Business Rule Analysis
- SIT / UAT Coordination
- Stakeholder & Vendor Coordination
- Production Issue Analysis
- Defect Root Cause Investigation
- Release Support & Post-production Stabilization
- Test Strategy & Acceptance Criteria Design
- Cross-functional Communication

AI & DIGITAL LITERACY

- Experienced in using Power Automate to support workflow tracking, test case management, release progress monitoring, and operational task automation.
- Familiar with using digital tools to improve team coordination, reduce manual tracking effort, and provide better visibility during release cycles.
- Able to work with API testing tools, database tools, application logs, JSON, and XML to support requirement analysis, system validation, and issue investigation.
- Currently expanding knowledge in automation and AI-assisted productivity, including Playwright, workflow automation, and AI tools for documentation, requirement analysis, and quality improvement.

TECHNICAL SKILLS

Business & System Analysis: Requirement Analysis, Business Flow Analysis, Functional Specification, System Documentation, Gap & Impact Analysis, Use Case Diagram, Sequence Diagram, ER Diagram, System Enhancement Support

API & Integration: RESTful APIs, Postman, SoapUI, Third-party Integration, API Response Analysis, Data Flow Analysis, Business Logic Validation, Batch / Scheduled Jobs

Delivery & QA Coordination: SIT/UAT Coordination, Acceptance Criteria Design, Regression Impact Analysis, Defect Root Cause Analysis, Production Support

Database & Data Validation: SQL, PL/SQL, PostgreSQL, Oracle, Data Validation, Log Analysis, XML, JSON

Tools: JIRA, Confluence, pgAdmin, PL/SQL Developer, Postman, SoapUI, Android Studio, Xcode, SourceTree

Automation / Productivity: Power Automate, Basic Playwright, AI-assisted Documentation

WORK EXPERIENCE

SENIOR SOFTWARE QUALITY ASSURANCE (CONTRACT)

ACCORD INNOVATIONS CO., LTD. | Sep 2025 – Dec 2025

Responsibilities

- Analyzed requirements from the Tech Lead and reviewed business logic, user flows, system behavior, and integration points for an e-commerce web platform.
- Identified requirement gaps, unclear workflows, and business logic conflicts, then coordinated with System Analysts, Product Owners, and stakeholders for clarification.
- Translated requirements into detailed test scenarios, validation criteria, and expected results covering business logic, UI behavior, and backend integration.
- Supported end-to-end validation across frontend and backend components to ensure system behavior aligned with business requirements.
- Communicated directly with Product Owners when requirement inconsistencies or business logic conflicts affected product decisions or release scope.

Impact Highlight:

Reduced requirement ambiguity before release by identifying business logic conflicts early and coordinating clarification with technical and product stakeholders.

SENIOR SOFTWARE TESTER (PERMANENT)

MISUMI (THAILAND) CO., LTD. | Mar 2023 – Jul 2025

Responsibilities

- Analyzed business requirements, and system behavior for e-commerce web and mobile applications across iOS and Android platforms.
- Converted requirements and business scenarios into test scenarios, validation criteria, and expected system behavior to support SIT/UAT and release readiness.
- Reviewed frontend behavior against API responses and backend logic to identify gaps between business requirements, UI behavior, and integration results.
- Coordinated with developers, vendors, and junior testers to clarify requirements, investigate complex scenarios, and support issue resolution.
- Supported mobile application validation using Android APK builds and iOS TestFlight releases across physical devices.
- Investigated application logs through Android Studio and Xcode to analyze API responses, integration behavior, and system issues.
- Planned test cycles, prioritized validation scope, distributed tasks, and tracked progress across large-scale releases and short-term enhancement projects.
- Used Power Automate to support test case workflow tracking, release progress monitoring, and operational task management.

Impact Highlight:

Improved release visibility and requirement-based validation by coordinating test activities, reviewing API behavior, clarifying system issues, and tracking validation progress across web and mobile application releases.

SYSTEM ANALYST (CONTRACT) / SENIOR SYSTEM ANALYST (PERMANENT)

EPIC CONSULTING CO., LTD. / MIMO TECH COMPANY LIMITED | Jun 2021 – Nov 2022

Projects : AIS FBB-Fibre Workflow & Web Register Platform

Responsibilities

- Analyzed business requirements, system workflows, and technical specifications for telecom onboarding, customer verification, order creation, installation scheduling, payment, and service subscription platforms.
- Translated business requirements into functional specifications, system documentation, workflow descriptions, and validation criteria for development and QA teams.
- Designed and clarified end-to-end business flows covering customer onboarding, document verification, order submission, installation scheduling, payment processing, and service subscription.
- Coordinated with business users, developers, QA teams, vendors, and related stakeholders to clarify requirements, confirm expected system behavior, and align delivery scope.
- Performed gap and impact analysis for system enhancements to ensure new features remained compatible with existing business processes and downstream system integrations.
- Supported service channel expansion initiatives, including Pocket WiFi subscription flows and integrated payment methods such as QR code and credit card transactions.
- Analyzed backend business rules, database logic, API behavior, and integration flows across Oracle and PostgreSQL environments to ensure functional consistency.
- Participated in system migration from on-premise infrastructure to cloud platforms, including validation of converted database logic and business rule consistency.
- Supported SIT/UAT preparation by clarifying requirements, defining validation scope, reviewing expected results, and coordinating issue resolution with related teams.
- Supported production issue analysis by investigating root causes, identifying business and system impacts, coordinating fixes, and supporting post-release stabilization.

Impact Highlight:

Supported system enhancement and migration activities for telecom service platforms while helping maintain business logic consistency across business flow, database, API, and frontend behavior.

SOFTWARE TESTER (CONTRACT)

APAR TECHNOLOGIES (THAILAND) LTD. | Sep 2018 – Mar 2021

Projects : Bangkoklife (BLA) Insurance & AIS Web Register Platform

Responsibilities

- Analyzed business requirements and translated them into test scenarios, validation criteria, and expected system behavior.
- Supported SIT and UAT activities by validating functional flows, integration behavior, backend data, and regression impact.
- Performed backend data validation using SQL queries to confirm business rules, transaction results, and data consistency.
- Validated functional flows, integration behavior, and regression impacts across Dev, SIT, and UAT environments.
- Coordinated defect clarification with development teams and followed up issues until closure during testing cycles.
- Supported requirement understanding and impact validation for system changes across insurance and telecom platforms.

Impact Highlight:

Strengthened requirement-based validation by combining functional testing, backend SQL validation, SIT/UAT support, and defect coordination across enterprise systems.

ASSOCIATE SOFTWARE TEST ENGINEERING (PERMANENT)

AWARE TECHNOLOGY SOLUTIONS. | Aug 2017 – Sep 2018

Projects : AIS SFF & CSP

Responsibilities

- Reviewed business requirements and system behavior to prepare validation scenarios and expected results.
- Executed SQL queries to validate backend data based on business requirements and system conditions.
- Documented test results, issue details, defect status, and validation evidence for project tracking.
- Supported functional validation, regression testing, and requirement-based testing across telecom systems.
- Coordinated with senior team members to clarify requirements, confirm expected behavior, and support issue investigation.

Impact Highlight:

Built a strong foundation in requirement-based testing, backend data validation, telecom workflow understanding, and system behavior analysis.

ACHIEVEMENTS & MEASURABLE RESULTS

- Supported system analysis, requirement clarification, testing, and release activities across Telecom, E-Commerce
 - Prepared functional specifications, workflow descriptions, validation criteria, and system documentation for development and QA.
 - Supported telecom service flows involving customer onboarding, document verification, order creation, installation scheduling, payment, and service subscription.
 - Participated in system migration validation from on-premise to cloud and from Oracle to PostgreSQL, focusing on backend logic and business rule consistency.
 - Coordinated with business users, developers, QA teams, vendors, Product Owners, and stakeholders to clarify requirements and support delivery alignment.
 - Identified requirement gaps, business logic conflicts, API mismatches, integration issues, and regression impacts before production release.
 - Used Power Automate to improve workflow tracking, test case monitoring, and release progress visibility.
 - Supported production issue investigation by analyzing root causes, business impacts, system impacts, and related data or integration behavior.
-

EDUCATION

BACHELOR OF ENGINEERING IN SOFTWARE ENGINEERING

University of Phayao | 2013 – 2016

LANGUAGE

English: Reading Intermediate, Writing Intermediate, Speaking Learning, Listening Beginner

PORTFOLIO / ONLINE PRESENCE

Web Profile: <https://profile-about-me-8dhg.vercelapp/>

Portfolio includes:

System Analyst profile, requirement analysis experience, business flow and integration background, selected project experience, technical skills, API/backend validation experience, and automation learning.
